

T. GURU HEMANTH

DEVOPS ENGINEER | AWS | AZURE | KUBERNETES | DOCKER | TERRAFORM | CI/CD

Email: guruhemanth0@gmail.com | Phone: +91 7993393713 | Location: Chennai, India | LinkedIn: linkedin.com/in/guruhemantht | GitHub: github.com/guruhemanth

PROFESSIONAL SUMMARY

DevOps Engineer with 3 years of production IT experience spanning infrastructure automation, Linux systems, cloud-native deployments, and enterprise environments. Hands-on experience with AWS and Azure cloud platforms, Kubernetes, Docker, Terraform, Jenkins, GitHub Actions, and Bash/Python automation for CI/CD, infrastructure provisioning, monitoring, and deployment workflows. Experienced in production support, disaster-recovery automation, patch deployment with rollback, security testing, REST API integration, and enterprise authentication infrastructure.

TECHNICAL SKILLS

Cloud Platforms:	AWS (EC2, VPC, EKS, RDS, S3, IAM, CloudFormation, ECR, CloudWatch, ELB); Azure (AKS, ACR, Virtual Networks, NSG, Load Balancers)
DevOps & IaC:	Git, Terraform, Ansible, Docker, Kubernetes, Helm, Jenkins, GitHub Actions, CI/CD
Languages & Scripting:	Python, Bash, JavaScript, SQL
Operating Systems:	Linux (Ubuntu, Fedora, RHEL), Windows Server
Databases:	OracleDB, PostgreSQL (High-Availability & Cluster Management)
Monitoring:	Prometheus, Grafana, AWS CloudWatch, ELK Stack
Security & Testing:	Burp Suite, Wireshark, OWASP, Vulnerability Testing, JMeter, JWT, OAuth 2.0, Bandit, pip-audit

PROFESSIONAL EXPERIENCE

Odyssey Technologies | Junior DevOps Engineer

Chennai, India | July 2024 - May 2026

Project: End-to-End DevOps Pipeline & Cloud-Native 2FA Microservice

Technologies: Azure (AKS, ACR, VNet, NSG, VMSS), Terraform, Jenkins, Docker, Kubernetes, Python Flask, Node.js

- Provisioned AKS cluster, private ACR, VNet with NSG firewall, and SSH Jumpbox using Terraform IaC — with AcrPull managed identity for credential-less image pulls and ProxyJump tunneling to private nodes.
- Built a 5-stage Jenkins CI/CD pipeline automating Docker multi-image builds, versioned ACR pushes (v\${BUILD_ID} + latest), and rolling K8s deployments — reducing release cycles from 30+ minutes to under 5.
- Orchestrated two-tier microservices (Flask frontend with 2 HA replicas via LoadBalancer, Node.js backend isolated behind ClusterIP) with inter-service communication through Kubernetes internal DNS.
- Achieved 100% infra reproducibility with modular Terraform + Azure CLI dual provisioning, standing up 10+ resources across 2 resource groups in under 10 minutes using SystemAssigned managed identity.
- Resolved 6 production-blocking issues including ACR ImagePullBackOff, Azure region capacity constraints, NSG rule configuration, and VMSS SSH key propagation via VMAccessForLinux extension.
- Automated deployment workflows via production Bash scripts, reducing deployment turnaround time by 40% and manual execution errors by 95% across 30+ client environments.
- Built production-grade Bash telemetry scripts and 24/7 server health-check automation to continuously monitor CPU, memory, disk, and service availability, accelerating anomaly remediation.
- Developed DC-DR switchover precheck scripts to validate server integrity during failover/failback activities, mitigating switchover operational risk.
- Engineered automated patch deployment scripts with integrated rollback capability, minimizing system downtime during patching cycles.
- Executed 50+ application security assessments via Burp Suite and Wireshark, coupled with JMeter load tests (10,000+ concurrent users), slashing security incidents by 60% and enhancing response times by 35%.
- Integrated enterprise REST APIs for 15+ clients processing 50,000+ daily transactions, enforcing JWT-based authentication for secure token issuance and access control.

Odyssey Technologies | Trainee Engineer

Chennai, India | June 2023 - June 2024

- Configured enterprise 2FA reverse proxy architectures and load balancing mechanisms, securing communication channels and managing authentication workflows between end users and backend application servers.
- Administered clustered 2FA reverse proxy servers to ensure high availability, efficient load distribution, and throughput optimization during peak traffic loads.
- Maintained production Linux environments, overseeing OracleDB multi-node cluster configurations, storage provisioning, and failover reliability.
- Executed the migration of 200,000+ 2FA enterprise users from legacy systems to a modernized platform with 100% data integrity and a zero-defect rate.
- Authored Functional Design Specifications (FDS) by translating client operational requirements into scalable deployment architectures.
- Monitored live system telemetry to proactively diagnose client- and server-side bottlenecks, preventing escalations and maximizing service availability.

PERSONAL PROJECTS

Secure Banking App | GitHub

2024

Technologies: AWS (EC2, RDS, EKS, VPC, ELB, IAM), Terraform, Ansible, Docker, Kubernetes, Jenkins, GitHub Actions, Python Flask, PostgreSQL, Bandit, pip-audit

- Architected a 4-stage progressive cloud migration (Docker Compose → EC2 Lift-and-Shift → EC2 + RDS Two-Tier → AWS EKS Cloud-Native) for a Python Flask banking REST API with PostgreSQL.
- Provisioned multi-tier AWS infrastructure using Terraform IaC — isolated VPCs, public/private subnets, IAM roles with least-privilege policies, Multi-AZ RDS instances, and EKS managed node groups.
- Enforced network segmentation by isolating PostgreSQL RDS in private subnets with security group whitelisting, and resolved EKS ENI IP exhaustion on t3.micro nodes using Recreate deployment strategy.
- Engineered a 7-stage Jenkins declarative pipeline automating linting (Flake8), unit testing (Pytest with in-memory SQLite), SAST scanning (Bandit), dependency auditing (pip-audit), Docker builds, and EKS deployments.
- Automated EC2 fleet configuration using Ansible playbooks for Docker installation, container lifecycle management, and application rollouts — eliminating manual SSH-based deployments.
- Built a parallel GitHub Actions CI/CD workflow with pip dependency caching, automated Pytest execution, conditional Docker Hub pushes, and GitHub Secrets-based credential management.

EDUCATION

Panimalar Institute of Technology, Chennai

2019 - 2023

Bachelor of Engineering (B.E.) in Electronics & Communication Engineering | CGPA: 8.54 / 10

Srichaitanya Junior College

2017 - 2019

Intermediate (B.I.E.) | CGPA: 8.73 / 10
