

T. GURU HEMANTH

DEVOPS ENGINEER | AWS | AZURE | KUBERNETES | DOCKER | TERRAFORM | CI/CD

Email: guruhemanth0@gmail.com | Phone: +91 7993393713 | Location: Chennai, India | LinkedIn: [linkedin.com/in/guruhemanth](https://www.linkedin.com/in/guruhemanth) | GitHub: github.com/guruhemanth

PROFESSIONAL SUMMARY

DevOps Engineer with 3 years of production IT experience spanning infrastructure automation, Linux systems, cloud-native deployments, and enterprise environments. Hands-on experience with AWS and Azure cloud platforms, Kubernetes, Docker, Terraform, Jenkins, GitHub Actions, and Bash/Python automation for CI/CD, infrastructure provisioning, monitoring, and deployment workflows. Experienced in production support, disaster-recovery automation, patch deployment with rollback, security testing, REST API integration, and enterprise authentication infrastructure.

TECHNICAL SKILLS

Cloud Platforms:	AWS (EC2, VPC, EKS, RDS, S3, IAM, CloudFormation, ECR, CloudWatch, ELB); Azure (AKS, ACR, Virtual Networks, NSG, Load Balancers)
DevOps & IaC:	Git, Terraform, Ansible, Docker, Kubernetes, Helm, Jenkins, GitHub Actions, CI/CD Pipelines
Languages & Scripting:	Python, Bash Shell Scripting, JavaScript (Node.js, Express), SQL
Operating Systems:	Linux (Ubuntu, Fedora, RHEL), Windows Server, Nginx Reverse Proxy, Socket.io
Databases:	PostgreSQL (High-Availability, PL/pgSQL Triggers, Multi-Tenancy), OracleDB (Cluster Management)
Monitoring & Telemetry:	Prometheus, Grafana, AWS CloudWatch, ELK Stack
Security & Testing:	Burp Suite, Wireshark, OWASP Top 10, JMeter Load Testing, JWT Authentication, Bcrypt Hashing, Bandit, pip-audit

PROFESSIONAL EXPERIENCE

Axonbloom | DevOps Intern

Remote | June 2024 – July 2024

Project: End-to-End DevOps Pipeline & Cloud-Native 2FA Microservice | *Azure, Terraform, Jenkins, Docker, K8s, Flask, Node.js*

- **Infrastructure as Code:** Provisioned AKS cluster, private ACR, VNet with NSG firewall, and SSH Jumpbox using Terraform IaC with AcrPull managed identity for credential-less image pulls and ProxyJump tunneling to private nodes.
- **CI/CD Automation:** Built a 5-stage Jenkins CI/CD pipeline automating Docker multi-image builds, versioned ACR pushes (v\${BUILD_ID} + latest), and rolling K8s deployments — reducing release cycles from 30+ minutes to under 5.
- **Microservices Orchestration:** Orchestrated two-tier microservices (Flask frontend with 2 HA replicas via LoadBalancer, Node.js backend isolated behind ClusterIP) with inter-service communication through Kubernetes internal DNS.
- **Infra Reproducibility:** Achieved 100% infra reproducibility with modular Terraform + Azure CLI dual provisioning, standing up 10+ resources across 2 resource groups in under 10 minutes using SystemAssigned managed identity.
- **Troubleshooting & Root-Cause Fixes:** Resolved 6 production-blocking issues including ACR ImagePullBackOff, Azure region capacity constraints, NSG rule configuration, and VMSS SSH key propagation via VMAccessForLinux extension.

Odyssey Technologies | Junior Executive, Solution Support

Chennai, India | July 2024 – May 2026

- **Deployment Automation:** Automated deployment workflows via production Bash scripts, reducing deployment turnaround time by 40% and manual execution errors by 95% across 30+ client environments.
- **Telemetry & Health Checks:** Built production-grade Bash telemetry scripts and 24/7 server health-check automation to continuously monitor CPU, memory, disk, and service availability, accelerating anomaly remediation.
- **Disaster Recovery Validation:** Developed DC-DR switchover precheck scripts to validate server integrity during failover/failback activities, mitigating switchover operational risk.
- **Patch Deployment & Rollback:** Engineered automated patch deployment scripts with integrated rollback capability, minimizing system downtime during patching cycles.
- **Security & Performance Testing:** Executed 50+ application security assessments via Burp Suite and Wireshark, coupled with JMeter load tests (10,000+ concurrent users), slashing security incidents by 60% and enhancing response times by 35%.
- **Enterprise API Integration:** Integrated enterprise REST APIs for 15+ clients processing 50,000+ daily transactions, enforcing JWT-based authentication for secure token issuance and access control.

- **2FA Architecture & Reverse Proxies:** Configured enterprise 2FA reverse proxy architectures and load balancing mechanisms, securing communication channels and managing authentication workflows between end users and backend application servers.
- **Clustered Server Administration:** Administered clustered 2FA reverse proxy servers to ensure high availability, efficient load distribution, and throughput optimization during peak traffic loads.
- **Linux & Database Operations:** Maintained production Linux environments, overseeing OracleDB multi-node cluster configurations, storage provisioning, and failover reliability.
- **Enterprise Migration:** Executed the migration of 200,000+ 2FA enterprise users from legacy systems to a modernized platform with 100% data integrity and zero defects.
- **Technical Specifications:** Authored Functional Design Specifications (FDS) by translating client operational requirements into scalable deployment architectures.
- **Live Telemetry Monitoring:** Monitored live system telemetry to proactively diagnose client- and server-side bottlenecks, preventing escalations and maximizing service availability.

KEY TECHNICAL PROJECTS

Secure Banking Cloud-Native Migration | AWS & Kubernetes

2024

Tech: AWS (EKS, RDS, VPC, IAM, ELB), Terraform, Ansible, Docker, Kubernetes, Jenkins, Python Flask, PostgreSQL, Bandit

- **Progressive Migration:** Architected a 4-stage progressive cloud migration (Docker Compose → EC2 Lift-and-Shift → EC2 + RDS Two-Tier → AWS EKS Cloud-Native) for a Python Flask banking REST API with PostgreSQL.
- **IaC Infrastructure:** Provisioned multi-tier AWS infrastructure using Terraform IaC — isolated VPCs, public/private subnets, IAM roles with least-privilege policies, Multi-AZ RDS instances, and EKS managed node groups.
- **Network Segmentation:** Enforced network segmentation by isolating PostgreSQL RDS in private subnets with security group whitelisting, and resolved EKS ENI IP exhaustion on t3.micro nodes using Recreate deployment strategy.
- **Security-Integrated CI/CD:** Engineered a 7-stage Jenkins declarative pipeline automating linting (Flake8), unit testing (Pytest), SAST scanning (Bandit), dependency auditing (pip-audit), Docker builds, and EKS deployments.
- **Fleet Configuration:** Automated EC2 fleet configuration using Ansible playbooks for Docker installation, container lifecycle management, and application rollouts — eliminating manual SSH-based deployments.

Multi-Tenant Real-Time Event & Fund Audit Platform | Full-Stack & DevOps

2026

Tech: Docker, Docker Compose, Nginx Reverse Proxy, Node.js, Express, Socket.io, PostgreSQL, PL/pgSQL Triggers, React, Tailwind, JWT

- **Multi-Tenant Architecture:** Designed a multi-tenant workspace architecture partitioning collection funds, user management, and real-time Socket.io rooms with 100% cross-tenant isolation.
- **Database-Level Audit Engine:** Engineered automated PL/pgSQL database triggers generating immutable before-and-after JSONB audit snapshots on every INSERT, UPDATE, and DELETE.
- **Production Containerization:** Containerized the full stack via multi-stage Docker builds (Vite builder → Nginx Alpine runtime) and Docker Compose, achieving a lightweight 28MB client footprint and automated reverse proxying.
- **Testing & Resilience:** Implemented an automated 34-test integration suite (100% pass rate) validating bcrypt authentication, multi-tenant isolation, route protection, and PL/pgSQL trigger integrity.

EDUCATION

Panimalar Institute of Technology, Chennai

2019 – 2023

Bachelor of Engineering (B.E.) in Electronics & Communication Engineering | CGPA: 8.54 / 10

Srichaitanya Junior College

2017 – 2019

Intermediate (B.I.E.) | CGPA: 8.73 / 10
